

WIND WEATHER SUN: The three enemies of any motorhome, RV or boat. You make the investment in these often expensive “Toys” to enjoy the outdoors with friends and family but sadly you soon realize that the very outdoors you love, overtime, adds unnecessary wear and tear to the exterior.

Probably the most destructive element on any man-made object is the sun. UV rays can and will breakdown the finish on even the most waxed and polished surfaces. Rubber seals and plastic don’t stand a chance over long periods of continued exposure. Combine this with water, freezing, and animals looking for a home and you have the worst conditions for synthetic materials not to mention electronics. Most vulnerable are seals, paint, tires, gaskets etc...

Storms, lightning and high winds are also a problem...

More than just covering it with an good quality cover, keeping your recreational vehicle indoors will significantly reduce the damaging effects of Mother Nature and adds years to your enjoyment as well as help maintain the value of your investment. Covering your RV and keeping it indoors really protects it from the elements.

Our facility, while not completely climate controlled, is partially insulated and does mitigate quick extreme temperature changes and condensation. When a cold surface suddenly meets with the warmth of the sun's rays, rapid expansion and contraction of materials from cold to hot puts strain and wear on components. Paint spiders, decals stretch.

Secure and Safe

Our facility is monitored by both on-site security guards and closed circuit camera systems mounted throughout.
